STORIES – GROUP 5

Story 1: User Registration and Login
Users can create an account and log in to or log out of the system so that they can buy, sell, or interact with study materials on the application.

Story 2: Terms of Service Acceptance
Users must accept the platform's terms of service when they start using the system. The terms include a clause stating that sellers are responsible for the originality of the materials they upload and that the application is not responsible for possible plagiarism issues.

Story 3: Course Search
Users can search for university courses on the main page and view their recent searches so that they can quickly find materials related to their classes.

Story 4: Course-Based Item Listings
Each course has a page that shows all available items related to that course, including physical and digital materials, with details such as description, status, and images. Users can express interest in items or directly purchase/rent them from this page.

Story 5: Item Details
Users can open an item and view its full details, such as description, status, images, and price. If the item is a digital product, information about the file is displayed, but the file itself cannot be downloaded until it is purchased.

Story 6: Digital Product Upload
Users can upload digital study materials such as scanned lecture notes or exam preparation files so that other students can obtain them through the application.

Story 7: Add New Item with Rent or Sale Option
Users can add new items to the platform and specify whether the item is for sale or for rent.

Story 8: Item Details Specification
When creating an item, the seller provides relevant information such as description, notes, price, and images.

Story 9: Course Association for Items
When adding a new item, the seller associates the item with specific University course(s) so that students can easily find materials relevant to their classes.

Story 10: Seller Listings Management
Sellers can view and manage all items they have listed on the platform.

Story 11: Item Editing
Sellers can edit item details such as description, images, and other relevant information through their listings page.

Story 12: Item Removal
Sellers can remove items completely from the platform through their listings page.

Story 13: Payment Method Specification
Sellers can specify the payment method for their items. Items can be sold either through monetary payment or points.

Story 14: Buyer Interest in an Item
When a buyer shows interest in an item, the item's status changes in the seller's listing so that the seller knows that one or more users are interested in purchasing or renting it.

Story 15: Buyer Interest List
Buyers can view a list of items they have shown interest in so that they can easily track ongoing purchase or rental discussions. They can also proceed to purchase items from this list.

Story 16: User Chat
Buyers and sellers can communicate through a chat system to discuss product details, meeting arrangements, or questions related to the item.

Story 17: Point System
Each user starts with 10 points after registration. When an item is sold using points, the seller earns the specified number of points. Buyers can use points as a payment method.

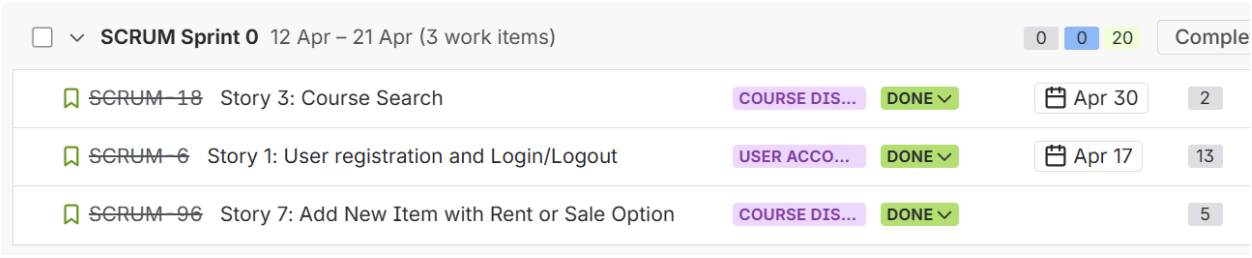

Story 18: Rental Agreement
For items listed for rent, buyers and sellers can agree on rental conditions and return expectations before completing the transaction through chat.

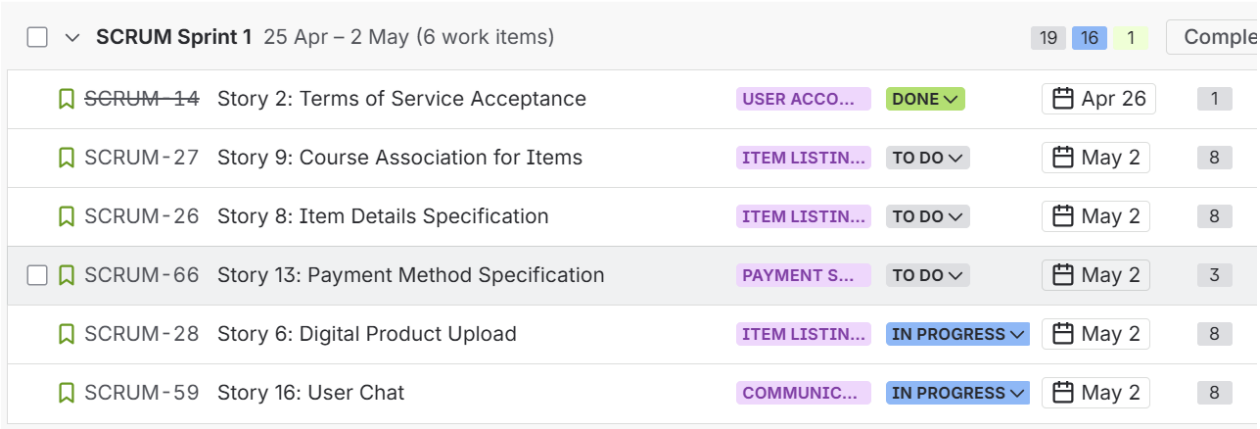

Story 19: Receipt Confirmation
After a purchase agreement, both the buyer and seller confirm the transaction through the system to indicate that the product and payment have been received.

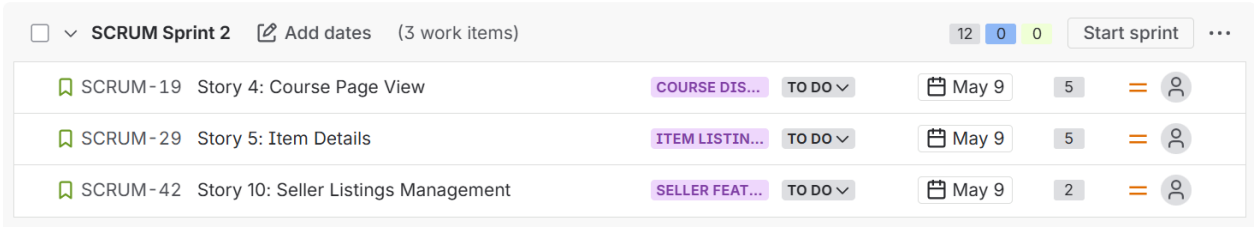

Story 20: Issue Reporting
Users can report problems or inappropriate items to the system administrators so that issues on the platform can be reviewed and handled. Reports are sent to a predefined email address on the platform.

Story 21 – Newly added based on Market Analysis: Course Material Rating Users can rate study materials so that they can identify high-quality resources and avoid low-quality or misleading content.

Story 22 - Newly added based on Market Analysis: Advanced Filtering of Items Users can filter items and materials based on criteria such as type (digital or physical) and price so that they can quickly find the most relevant resources for their needs
